

Lab Final

CSE 3120 Web Programming Lab | Section – 02

Create a simple web application using HTML, PHP, and MySQL with the following requirements.

You are given the following screenshot, what should be in the HTML form. In the HTML form there is an input field for Name, and a Radio Button for Gender.

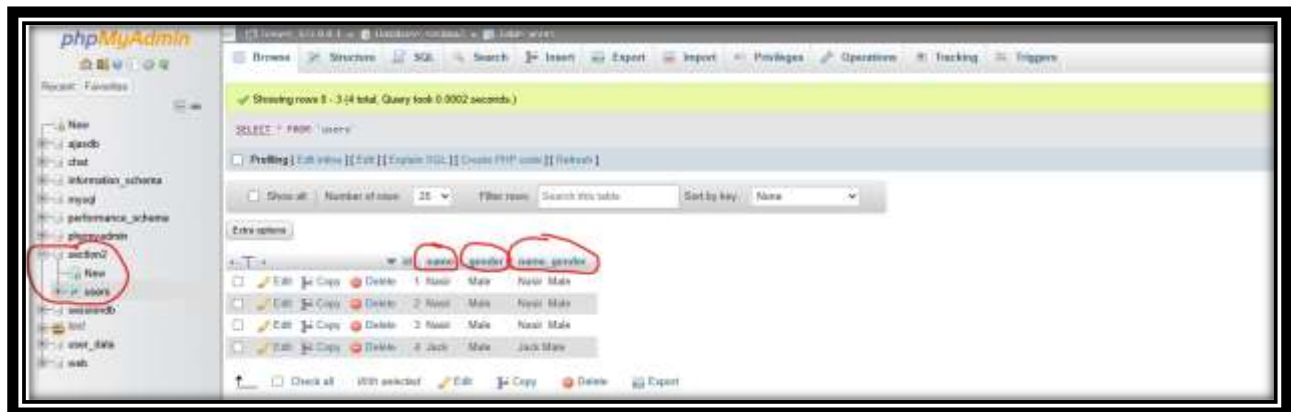

The screenshot shows a web browser window with the address bar displaying 'localhost/section2/'. Below the address bar, there are several bookmarks: Gmail, YouTube, Maps, Machine Learning..., and Python Tutorial - Py... The main content area of the browser displays a simple HTML form. The form consists of a text input field labeled 'Name:', followed by two radio buttons labeled 'Male' and 'Female' under the label 'Gender:'. At the bottom of the form is a 'Submit' button.

Figure 1: The Expected HTML Form

You are given the database named “**section2**” in a .sql file. Click the link below to download the .sql file.

<https://drive.google.com/file/d/1yd9BYsFptBfIYqyuiEpWZZ3BP6uF2I4c/view?usp=sharing>

In this section2.sql file, we have a table named “users”. It has three columns. They are name, gender, name_gender.

The screenshot shows the phpMyAdmin interface. On the left sidebar, the 'section2' database is selected. The main panel displays the 'users' table structure and data. The table has three columns: 'name', 'gender', and 'name_gender'. The table contains three rows of data. The columns are circled in red in the original image.

name	gender	name_gender
Nasiir	Male	Nasiir Male
Nasir	Male	Nasir Male
Nasir	Male	Nasir Male

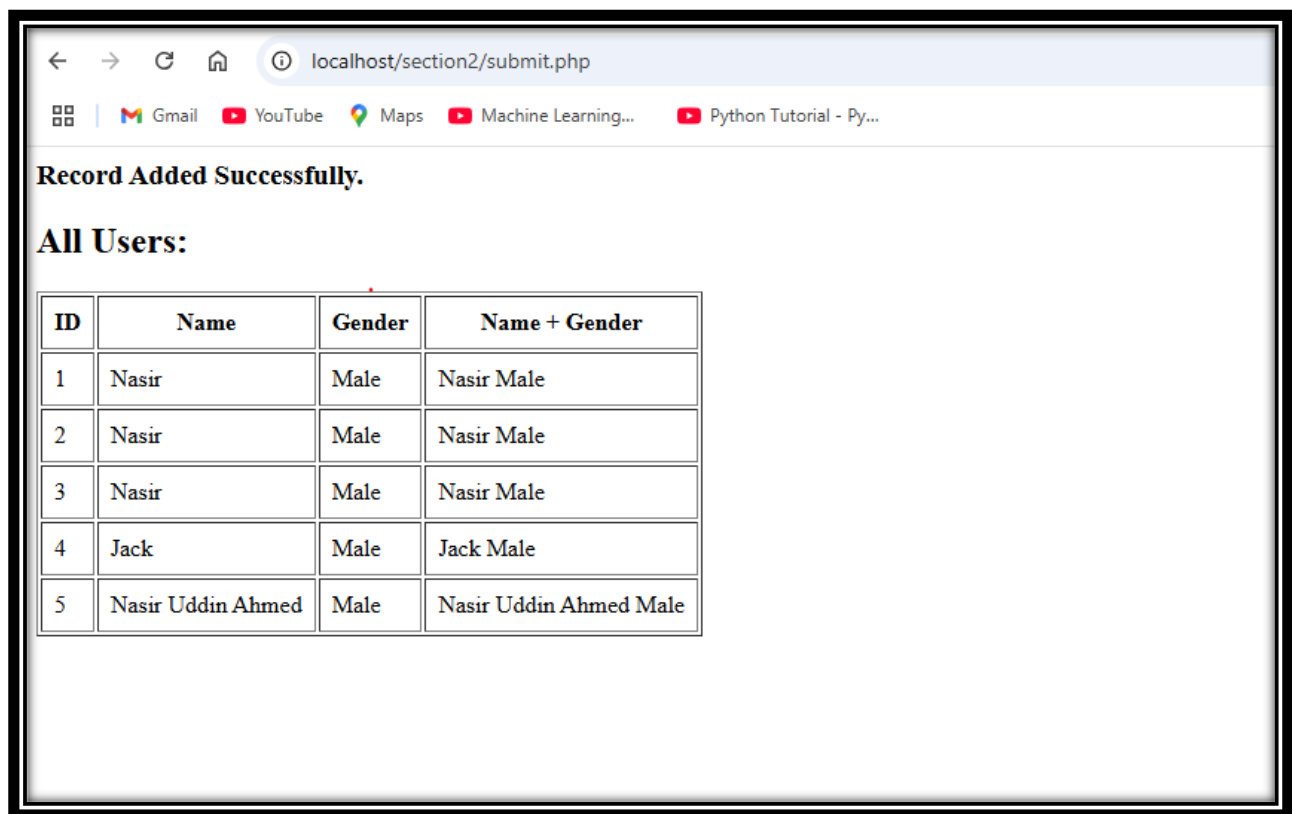

Figure 2: MySQL Database Overview

In the **HTML form**, when you press, the **Submit button**, the **php code** will process, and store **Name** in the **name column**. **Gender** value in **gender column**, and **name_gender** this column is the **concatenation of name and gender**.

Create an **index.php** file. Inside this file, write necessary, HTML form related tags. In the action field of the form, connect it with **submit.php**

In this **submit.php** file, put all the php codes, database connection, SQL queries.

After pressing the Submit button, the form data will be stored in the database, as showed in Figure 2. Also, it will display the data in the submit.php page, like below.

The screenshot shows a web browser window with the address bar displaying 'localhost/section2/submit.php'. Below the address bar, there are several bookmarks: Gmail, YouTube, Maps, Machine Learning..., and Python Tutorial - Py... The main content of the page displays a message 'Record Added Successfully.' followed by the heading 'All Users:'. Below this heading is a table with four columns: ID, Name, Gender, and Name + Gender. The table contains five rows of data.

ID	Name	Gender	Name + Gender
1	Nasir	Male	Nasir Male
2	Nasir	Male	Nasir Male
3	Nasir	Male	Nasir Male
4	Jack	Male	Jack Male
5	Nasir Uddin Ahmed	Male	Nasir Uddin Ahmed Male
